VIA: Visually Impaired Advancement offers a wide range of “vision rehabilitation” professional services. These services help restore function after vision loss, just as physical therapy restores function after a stroke or other injury.

VISION REHABILITATION THERAPY (VRT)
With VIA’s VRT on adaptive tools and techniques, you can do the household things that you did before vision loss; you’re just going to do it a little differently.

ORIENTATION & MOBILITY (O&M)
VIA’s O&Ms can help you get around your own home, neighborhood, workplaces, or other community settings. Through the use of residual vision, a sighted guide, long cane, guide dog, public transportation, or current technology, you can learn to travel with confidence.

TEACHER OF THE VISUALLY IMPAIRED (TVI)
VIA’s TVIs are special education teacher who have received certification and specialized training in meeting the educational needs of students who are blind or have visual impairments.

SOCIAL CASEWORK SERVICES
VIA’s Social Casework Services focus on meeting physical, emotional, and social needs throughout the adjustment to vision loss process. Social Casework Services can also include support groups adjustment counseling.
